Installing Dealer

Plan ahead and make sure your installation is a great success! Remember to check the latest information on these products and make sure that the following items are available prior to installation.

- Verify dedicated power source and check for stability. The MX-M6570/M7570 Document Systems require a 120 VAC, 60 Hz power source and draw up to 16 Amps current (requires a 20 Amp circuit breaker).

The MX-M6570/M7570 main unit requires 110-127 V AC @ 60 HZ with a 20 A receptacle outlet and circuit breaker.

The MX-FN21 and MX-FN22 options each require 110-127 V AC @ 60 HZ with a separate 15 A receptacle outlet and circuit breaker.

- Confirm that you have the latest firmware available from www.sharp-idncservice.com to update your MX-M6570/M7570 Document Systems to the latest version.
- Some accessories require a product key for operation. You should obtain the accessory Application Code and machine's serial number to register the product key online prior to arrival at the customer location.
- Check to see if My Sharp™ online training is set up for the end-user.

- Verify that the customer has enough supplies on-hand to complete a large rush job. After-hours printing and/or holiday work may take place following an installation. See Supplies & Accessories list on the following page.
